- a. Measured at the discharge terminal point of the compressor package in accordance with
 - Annex E to ISO 1217; acfm is actual cubic feet per minute at inlet conditions.
- b. The operating pressure at which the Capacity and Electrical Consumption were measured for this data sheet.
 c. Maximum pressure attainable at full flow, usually the unload pressure setting for load/no load control or the maximum pressure attainable before capacity control begins. May require additional power.
- d. No Load Power. In accordance with ISO 1217, Annex E, if measurement of no load power equals less than 1%, manufacturer may state "not significant" or "0" on the test report.
 e. Tolerance is specified in Annex E to ISO 1217 as follows:
- NOTE: The terms "power" and "energy" are synonymous for purposes of this document
